FISIOBOX ENGINE

MODULAR PHYSIOTHERAPY SOLUTION TAILORED TO THE THERAPIST

FisioBox Engine is a modular physiotherapy system designed for the **individual selection and combination** of therapeutic technologies.

It adapts to your clinical workflow and **enables device configuration** according to your specialization and daily therapeutic practice.

ONE SYSTEM. MULTIPLE CONFIGURATIONS

The system integrates a **Small and a Large therapeutic module**. Its modular architecture allows flexible combination of different technologies to match clinical requirements and therapy protocols.

7 Major Modalities

RSWT + VIBRATION

PMST + COLD LASER

2 Special Combinations

WHY CHOOSE COMBINED MODULES?

✓ Broader treatment options with a single device

Integrates multiple therapeutic technologies, enabling a wider range of interventions without additional equipment.

✓ Enhanced work efficiency and optimized workflow

Integrated functions streamline clinical procedures and improve staff productivity.

✓ Space optimization

Compact modular design consolidates multiple functions into a single device, reducing the need for additional machines and maximizing clinical space utilization.
